

Welcome Document

Dartmouth Libraries

The **Reproducible Research Group** (Dartmouth Libraries and Research Computing) is pleased to welcome you to our **Concepts to Code** workshop. You'll explore computational research best practices and examine how approaches differ across academic fields in our *Concepts* sessions. Then, in hands-on *Code* sessions, you'll build the programming skills in R to put these best practices into action.

Concepts to Code: Building Good Computational Research Practices with R

Sept 2 & 3, 2026

Berry 180A (The LINK)

Baker-Berry Library, Dartmouth College

Before the Workshop Begins

Download R and RStudio following the [instructions here](#).

What to bring

1. Laptop and charger (unless your battery can last all day)
2. *Optional*: a dataset you want to work with, preferably in `.csv` format if possible (if working with Excel, you can save an individual worksheet this way: **File** → **Save As** → from the file type dropdown menu select **CSV-UTF-8**)
3. An open mind ready to learn

Key Links / Resources

- [Registration Page](#) with workshop description. *Note: register for both days!*
- [The Workshop Github repository](#)
 - **Welcome Document (START HERE):** dartgo.org/f26_research-fundamentals
(QR code below)

- **DIRECT DOWNLOAD LINK** - *click here to download workshop materials:*
dartgo.org/f26_research-fundamentals_download (QR code below)

*If the above link doesn't work for you, you can 1) go directly to our [Github workshop repository](#), select the green **Code** button and click on **Download ZIP**; or 2) download [a copy of the zipped workshop folder](#) from [Google Drive](#).

Instructors

EMILY MYERS

Research Data Librarian, Research Facilitation (Dartmouth Libraries)

Specialties: quantitative social sciences, causal inference, data analysis in R, data visualization

Meet with me: dartgo.org/emily-cal

Contact me: emily.h.myers@dartmouth.edu

KATIE OWERS BONNER

Senior Research Data Science Specialist, Research Facilitation (Dartmouth Libraries)

Specialties: quantitative analysis, biological and medical research, data visualization, programming in R

Meet with me: dartgo.org/katie

Contact me: Katie.Owers.Bonner@dartmouth.edu

JEREMY MIKECZ

Research Data Science Specialist, Research Facilitation (Dartmouth Libraries)

Specialties: bibliometrics, data visualization, digital humanities, GIS & digital mapping, programming in Python & R, text analysis / handwritten text recognition

Meet with me: dartgo.org/jeremy

Contact me: jeremy.m.mikecz@dartmouth.edu

Research Facilitation

You can contact your instructors directly at the email addresses listed above.

If you have a computational research or data-intensive project you need help with, but aren't sure who to ask, you can reach our whole department at Research.Facilitation@dartmouth.edu and someone will assist you.

To learn more about our group visit [our webpage](#).

Facilities: Dartmouth Libraries

The LINK (Berry 180A)

The LINK is a new teaching and learning space found on Berry Floor 1 directly across from the circulation desk (to the east). [Click here](#) for more information about this space.

Accessible entrance

Handicap parking and an accessible entrance may be found on the East side of Baker (on College Ave., see the library [Plan your visit](#) page for more detail).

Restrooms

[Restroom map](#)

- **Men's and women's restrooms** are found just to the right of the circulation desk
- **All-gender, single-occupancy restrooms** - nearest locations:
 - In the stairwell behind the former Baker Café
 - In the Stacks, there are multiple near the elevator on the following floors (Basement + Floors 4, 5, and 6)

Food & Drink

A light breakfast (pastries / coffee) and boxed lunches from Lou's (sandwiches, chips) will be provided to all registered participants. Additional snacks and hot & cold drinks may be purchased at Novack Café (7:30 am - 2:30 pm) just one floor down in Berry.

Schedule

This workshop pairs Concepts lessons with Coding lessons.

In the **Concepts lessons** (“a” sessions), you will learn computational research principles - ideas that apply regardless of tools used: from file-naming conventions and project organization to reproducibility and programming best practices.

In the **hands-on Coding lessons** (“b” sessions), you will apply and practice what you learned in the Concepts sessions: i.e., setting up a project in R Studio, and writing R code that explores, cleans, analyzes, and visualizes your data.

Day 1 (Wednesday Sept 2)

- 9:00 - 9:15 Welcome / Introductions / Get to know the people around you
- Session 1a: Research Questions & Project Design (9:15 - 10:15am)
- *Break*
- Session 1b: Starting a Research Project in R (10:30 - 12:00)
- *Lunch*
- Session 2a: Exploring your Data (12:45 - 1:45pm)
- *Break*
- Session 2b: Exploratory Data Analysis in R (2:00 - 3:30pm)

Day 2 (Thursday Sept 3)

- 9:00 - 9:15 Welcome / Intros
- Session 3a: Introduction to Data Cleaning for Analysis and Reproducible Research (9:15 - 10:15am)
- *Break*
- Session 3b: Data Cleaning with R (10:30 - 12:00)
- *Lunch*
- Session 4a: Computational / Reproducible Research Best Practices (12:45 - 1:45pm)
- *Break*
- Session 4b: Applying Reproducible Research Best Practices to your Own Projects in R (2:00 - 3:30pm)

Feedback

Our goal is to provide positive and meaningful educational experiences for all participants in our workshops. Help us improve by letting us know what we did right, what we can improve on, and what other workshops / offerings you would like to see in the future. **Please fill out this survey at the end of our workshop: dartgo.org/feedback.**
